Chapter 7 Transport

7.1 Introduction

- a. This introduction is to assist the lay reader to understand how this chapter works and what it applies to. It is not an aid to interpretation in a legal sense.
- b. This chapter relates to transport requirements for all activities that occur throughout the District and to activities within the Transport Zone. Objectives, policies, rules, standards and assessment criteria relating to transport are provided that are not zone specific, as well specific provisions for the Transport Zone. This approach is informed by national and regional planning documents, but in particular the [Canterbury Regional Policy Statement](#).
- c. Functioning transport networks and transport modes are essential facilities and services that assist meet the needs of people and communities and promote the efficient functioning of the District.

The land transport network therefore forms an important component of the physical resources of the District.

- d. In the life of the plan new roads will be vested and some roads will be stopped. The plan provides that when new roads are vested they become part of the Transport Zone and are subject to all the provisions of that zone. Where roads are stopped they become part of the adjoining zone as shown on the planning maps. Where there are different zones on each side of the road those zones shall apply to the area of stopped road on the basis that the zone boundaries shall be the centre line of the road.
- e. The provisions in this chapter give effect to the [Chapter 3 Strategic Directions objectives](#).

7.2 Objectives and Policies

7.2.1 Objective — Integrated transport system for Christchurch District

- a. An integrated transport system for Christchurch District:
 - i. that is safe and efficient for all transport modes;
 - ii. that is responsive to the current recovery needs, future needs, and enables economic development, in particular an accessible Central City able to accommodate projected population growth;
 - iii. that supports safe, healthy and liveable communities by maximising integration with land use;
 - iv. that reduces dependency on private motor vehicles and promotes the use of public and active transport;
 - v. that is managed using the one network approach.

Advice note:

- 1. The “One Network Approach” is an approach where the transport network is considered as a whole. The aim of this approach is to ensure that the management and provision of all transport infrastructure (including all transport modes) is well connected and undertaken in an efficient and integrated manner. For more guidance on how the "one network approach" is applied, please refer to the [Greater Christchurch Transport Statement 2012](#) and [Christchurch Transport Strategic Plan 2012](#).

7.2.1.1 Policy – Establishment of a road classification system

- a. Identify a road network that connects people and places and recognises different access and movement functions for all people and transport modes, whilst:
 - i. supporting the safe and efficient operation of the transport network;
 - ii. providing for public places in accordance with the function of the road to enable community activities including opportunities for people to interact and spend time;
 - iii. providing space for utility services;

- iv. reflecting neighbourhood identity and amenity values;
 - v. recognising cross-boundary connections with adjoining districts, and
 - vi. providing for the efficient and effective functioning of the strategic transport network, including for freight.
- b. Recognise the Central City in the road classification system by establishing a people-focused and slow vehicle inner zone which provides safe and effective access and movement for all forms of transport.

Advice note:

- 1. Refer to Appendix 7.5.12 for a description of the road classification system.
- 2. Policy 7.2.1.1 also achieves Objective 7.2.2.

7.2.1.2 Policy – High trip generating activities

- a. Manage the adverse effects of high trip generating activities, except for permitted activities within the Central City, on the transport system by assessing their location and design with regard to the extent that they:
- i. are permitted¹ by the zone in which they are located;
 - ii. are located in urban areas and generate additional vehicle trips beyond what is already established or consented, unless the already established or consented vehicle trips are specifically included in rule thresholds;
 - iii. are accessible by a range of transport modes and encourage public and active transport use;
 - iv. do not compromise the safe, efficient and effective use of the transport system;
 - v. provide patterns of development that optimise use of the existing transport system;
 - vi. maximise positive transport effects;
 - vii. avoid significant adverse transport effects of activities where they are not permitted by the zone in which they are located;
 - viii. mitigate other adverse transport effects, such as effects on communities, and the amenity values of the surrounding environment, including through travel demand management measures;
 - ix. provide for the transport needs of people whose mobility is restricted; ~~and~~
 - x. integrate and coordinate with the transport system, including proposed transport infrastructure and service improvements; and
 - xi. Incorporate measures to promote opportunities for safe and efficient travel other than by conventional private vehicles, that seek to reduce greenhouse gas emissions from vehicular trips associated with the activity.

¹ Refers to the activity being listed as a permitted activity in the activity status table for the zone in which it is located.

Advice note:

 - i. Enable activities to provide car parking spaces and loading spaces, whilst minimising any adverse effects on the efficiency and safety of the transportation networks, including public transport, to the extent practicable.
 - ii. Manage the development of commercial car parking buildings and parking lots within the Central City so that they:
 - A. support the recovery of the Central City;
 - B. are easily accessible for businesses within the Central City;
 - C. minimise any adverse effects on the efficiency and safety of the transportation networks of all users, to the extent practicable;

adjoins it (as shown on the planning maps) and subject to all the provisions for that zone from the date of the stopping and removal of any relevant designation.

- c. Where the zoning of the land that adjoins one side of the **road** being stopped is different to that of the land that adjoins the other side of that **road**, then the **road** shall be deemed to be included in both zones (as shown on the planning maps) on the basis that the zone boundaries shall be deemed as the centre line of the **road**.

- p. Stall widths shall be increased by 300 millimetres where they abut permanent obstructions such as a wall, column or other permanent obstruction. Where there is such an obstruction on both sides of a **parking space** the minimum width shall be increased by 600mm.
- q. The stall depth may be reduced by the corresponding overhang length if a low kerb allows overhang, but this overhang shall not encroach any pedestrian facilities or required landscape areas.

Advice note:

1. Long term parking: generally all day parking.
2. Medium term parking: generally two to four hour parking.
3. Short term parking: generally two hour parking or less.
4. Aisle widths for 90° parking allow for two-way operation. If not otherwise specified, all other aisle widths are given for one-way operation with forward entry to spaces.
5. Design guidance for **parking areas** in **buildings** may be obtained from the [New Zealand Building Code D1/AS1: Access Routes](#) or *Australian/New Zealand Standard Offstreet Parking, Part 1: Car Parking Facilities, AS/NZS 2890.1:2004*, and any subsequent amendments. Compliance with the Australian/ New Zealand Standard is recommended, but is not a requirement to achieve permitted activity status.

Appendix 7.5.2 – Cycle parking facilities

- a. ~~Visitor~~ Cycle parking facilities shall be provided as follows:
 - i. The number of visitor cycle parks provided on the same **site** as the activity shall be at least the minimum number of visitor cycle parks specified in Table 7.5.2.1.
 - A. when calculating the overall cycle parking requirements for an activity the separation of areas into different activities will be required where the **GFA** of an activity (or **PFA** or other such measurement that the standards for the relevant activity is based upon) exceeds 10 per cent of the total **GFA** of the activity. The total cycle parking requirement for any activity will be the sum of the parking requirements for each area.
 - B. where the calculation of the required cycle parks results in a fractional space, any fraction that is less than one-half will be disregarded and any fraction of one-half or more will be counted as one space. The parking requirements for different types of cycle parks (i.e. staff, visitors etc) shall be calculated and rounded separately.
 - C. where an activity falls under the definition of more than one activity in Table 7.5.2.1, then the higher cycle parking requirement shall apply.
 - D. where an activity does not fall within a particular category, the activity which is closest in definition shall apply.
 - ii. Stands shall be securely anchored to an immovable object.
 - iii. Stands shall support the bicycle frame and front wheel.
 - iv. Stands shall allow the bicycle frame to be secured.

- v. Cycle parking facilities shall be clearly signposted or visible to cyclists entering the **site**.
- vi. Cycle parking facilities shall be located so as not to impede pedestrian thoroughfares including areas used by people whose mobility or vision is restricted.
- vii. Cycle parking facilities shall be located so that the bicycle is at no risk of damage from **vehicle movements** within the **site**.
- viii. Cycle parking facilities shall be located as close as possible to and no more than 30 metres from at least one main pedestrian public entrance to the **building**/activity. However, the requirement to provide visitor cycle parking does not apply to a **building** on a **key pedestrian frontage** that has no **setback** from the **road frontage**, which results in there being no space for the visitor cycle parking to be provided within 30 metres of at least one main pedestrian public entrance. Within the **Central City**, any activity where the **building** has no **road frontage setback** for the entire length of the **site** visitor cycle parking is not required.
- ix. Lighting must comply with the lighting requirements in **Rule 7.4.3.6 a**.
- x. Stands shall have the minimum dimensions in Figure 2 and within the **Central City and for all residential developments**, shall be designed to accommodate the turning path of a cycle as shown in Figure 3.
- xi. Cycle parking facilities shall be available during the hours of operation and shall not be diminished by the subsequent erection of any structure, storage of goods, or any other use.

Advice note:

1. Where there is more than one public entrance to the **building**, it is recommended that **visitor** cycle parking is apportioned between the entrances in accordance with their potential usage.

2. The installation of standard 240V electrical power points in cycle parking facilities is strongly encouraged to enable the charging of e-bikes, e-scooters and other micro mobility devices. A ratio of 1 power point to 5 parking spaces is recommended to accommodate future growth.

- b. Staff/residents/students cycle parking facilities shall be provided as follows:
 - i. The number of staff/residents/students cycle parks provided shall be at least the minimum number of staff/residents/students cycle parks in Table 7.5.2.1. Where an activity does not fall within a particular category, the activity which is closest in definition shall apply. Where the calculation of the required parks results in a fractional space, any fraction that is less than one-half will be disregarded and any fraction of one-half or more will be counted as one space. The parking requirements for different types of carparks (i.e. staff, visitors etc) shall be calculated and rounded separately.
 - ii. Staff/residents/students cycle parking facilities shall be located so it is easily **accessible** for staff, residents or students of the activity, except within the **Central City** staff cycle parking may be provided on a **site** within 200 metres of the **site** on which the activity is undertaken.
 - iii. Staff/ residents/ tertiary students' cycle parking facilities shall be located in:
 - A. a covered area; and
 - B. a secure area, unless located in an area where access by the general public is generally excluded.

Advice note:

1. It is recommended that cycle parking at schools is designed and managed to discourage theft of bicycles.
- iv. Where a stand is provided, it shall meet the visitor cycle parking requirements in (a) except for (a)(v) and (a)(viii).
- v. Outside the **Central City**, the number of on-site cycle parking end of trip facilities provided shall be at least the minimum number of cycle parking end of trip facilities set out in Table 7.5.2.2.
- c. **Full time equivalent student** numbers for **Tertiary Education and Research Activities** shall be assessed annually as of 1 July, and shall be rounded to the nearest 100 **FTE** students, if there are more than 1000 **FTE** Students at the activity in total.. Any additional cycle facilities required shall be provided within 12 months of the date of assessment.
- d. For **sites** with activities that existed on 3 September 2010 (i.e. prior to the Canterbury earthquakes of 2010/2011), Table 7.5.2.1 shall be applied to the rebuild of that activity, as follows:
 - i. For the size of the activity's **building** floor area/ scale of the activity that existed on 3 September 2010, Table 7.5.2.1 does not apply, as long as the activity provides at least the same amount of on-site cycle parking that existed on 3 September 2010.
 - ii. For any addition to the size of the activity's **building** floor area/ scale of the activity that is an increase to what existed on 3 September 2010, Table 7.5.2.1 shall apply in respect of the increase.

¹ Showers only need to be shown on building consent plans. If the activity requires a resource consent, the location and design of any required showers do not need to be shown at that stage as long as the application states the number of showers proposed to be provided.

² Where the calculation of the required showers results in a staff cycle space value that is not a round number of 10, any value that is 4 or less will be disregarded and any value 5 or more will be counted as one shower.

³ The minimum internal dimensions of a single locker shall be: height - 85 centimetres, depth - 45 centimetres, width - 20 centimetres

Appendix 7.5.3 – Loading areas

- a. The minimum number of on-site **loading spaces** provided shall be in accordance with Table 7.5.3.1.
- i. Where an activity does not fall within a particular category, the activity which is closest in definition shall apply.
 - ii. Where the calculation of the required **loading space** results in a fractional space, any fraction that is less than one-half will be disregarded and any fraction of one-half or more will be counted as one space. The loading space requirements for different types of carparks (i.e. staff, visitors etc) shall be calculated and rounded separately.
 - iii. The **loading space** requirements listed in Table 7.5.3.1 are categorised by activity. When calculating the overall **loading space** requirements for an activity the separation of areas into different activities will be required where the **GFA** of an activity (or **PFA** or other such measurement that the standards for the relevant activity is based upon) exceeds 10 per cent of the total **GFA** of the activity. The total **loading space** requirement for any activity will be the sum of the **loading space** requirements for each area.
 - iv. Where an activity falls under the definition of more than one activity in Table 7.5.3.1, then the higher **loading space** requirement shall apply.
 - v. Any space required for **loading**, other than for a **residential activity**, fire stations and ambulance stations, shall be available during the hours of operation and shall not be diminished by the subsequent erection of any structure, storage of goods, or any other use.
 - vi. **Full time equivalent student** numbers for **Tertiary Education and Research Activities** shall be assessed annually as of 1 July, and shall be rounded to the nearest 100 **FTE** students, if there are more than 1000 FTE Students at the activity in total.. Any additional **loading spaces** required shall be provided within 12 months of the date of assessment.
 - vii. For **sites** with activities, listed under **Rule 7.4.3.3 a.**, that existed on 3 September 2010 (i.e. prior to the Canterbury earthquakes of 2010/2011), Table 7.5.3.1 shall be applied to the rebuild of that activity, as follows:
 - A. For the size of the activity's **building** floor area/ scale of the activity that existed on 3 September 2010, Table 7.5.3.1 does not apply, as long as the activity provides at least the same amount of on-site **loading spaces** that existed on 3 September 2010.
 - B. For any addition to the size of the activity's **building** floor area/ scale of the activity that is an increase to what existed on 3 September 2010, Table 7.5.3.1 shall apply in respect of the increase.
 - viii. Within the **Central City**, no **loading** is required where a suitable on- or off-street **loading** facility is provided within 50 metres of any part of the **site** and the route between the **loading** facility and the **site** does not require crossing any **road**. Use of an off-street **loading** facility on a separate **site** by an activity must be protected for the use of that activity (and any future activity on the **site**) by an appropriate legal instrument. A copy of the appropriate legal instrument shall be provided to **Council** for its records.
- b. Minimum **loading area** dimensions:

- i. A **heavy vehicle** bay shall comply with one of the following vehicle sizes in Table 7.5.3.2 (depending on the largest vehicle expected to use the **loading space**). For commercial and industrial **sites** where waste collection occurs internally, a **loading space** and associated **manoeuvring area** large enough to accommodate a medium rigid vehicle must be allowed for.
- ii. A 99 percentile vehicle bay shall be designed to the following minimum standards in Table 7.5.3.3:

Advice note:

1. Design guidance for commercial **vehicle access** and parking may be obtained from the Australian Standard Parking Facilities Part 2: Off street commercial vehicle facilities, AS 2890.2:2002, and any subsequent amendments. Please note compliance with AS 2890.2:2002 is recommended, but is not a requirement to achieve permitted activity status.

Appendix 7.5.6 – Manoeuvring for parking areas and loading areas

- a. **Parking spaces** shall be located so as to ensure that no vehicle is required to carry out any reverse manoeuvring when moving from any **vehicle access** to any **parking spaces**, except for parallel **parking spaces**.
- b. **Parking spaces** and **loading spaces** shall be located so that vehicles are not required to undertake more than one reverse manoeuvre when manoeuvring out of any **parking space** or **loading space**.
- c. For any activity, the **vehicle access manoeuvring area** shall be designed to accommodate the 85th percentile design motor car, as specified in [Appendix 7.5.4](#), as a minimum.

Appendix 7.5.7 – Access design and gradient

- a. All **vehicle access** to and within a **site** shall be in accordance with the standards set out in Table 7.5.7.1 below. For the purposes of Table 7.5.7.1 **visitor accommodation** for up to ten guests shall comply with the standards for **residential activities**.

(Plan Change 4 Council Decision subject to appeal)

- b. Any **vehicle accesses** longer than 50 metres and with a formed width less than 5.5 metres wide shall provide passing opportunities (with a minimum width of 5.5 metres) at least every 50 metres, with the first being at the **site boundary**.

~~c. Where a **vehicle access** serves nine or more **parking spaces** or **residential units** and there is no other **pedestrian and/or cycle access** available to the **site** then a minimum **1.5 metres wide space** for **pedestrians and/or cycle** shall be provided and the legal width of the **access** shall be increased by **1.5 metres**.~~

- c. For developments of three or more **residential units**, each unit shall be accessed by either a combined **vehicle-pedestrian access** or a dedicated **pedestrian access** that is a minimum of 3 metres in width with a formed pathway of at least 1.5m; and each access shall be from the street to the front door of the unit and any garage or **parking space** for that unit.

- d. Any **pedestrian access** longer than 50m with a formed width of less than 1.8m shall provide passing opportunities with a minimum length of 2m and a minimum width of 1.8m at least every 50m.

~~d-e.~~ All **vehicle access** to and /or from a **site** in a residential zone, shall allow clear visibility above 1 metre within a triangle measured for a width of at least 1.5 metres either side of the entrance, and for a length at least ~~2-1.5~~ metres measured from the **road boundary**. This rule does not apply to sites that have an existing vehicle access, unless there has been a change in the location of the entrance of the vehicle access (at the road boundary) and/or an increase in the number of residential units that the vehicle access serves. Where the vehicle access is located less than 1.5m from a side boundary of the site, then the required width of clear visibility triangle on that side of the access shall be the distance between the vehicle access and the side boundary. For the avoidance of doubt the clear visibility triangle does not extend into an adjacent site. This requirement does not apply, if an audio and visual method of warning pedestrians of the presence of vehicles about to exit the access point or a visibility splay as per [Rule 7.4.3.7](#) has been provided.

~~e-f.~~ Where **parking spaces** are provided in separate areas, then the connecting **vehicle access** between the **parking areas** shall be in accordance with the standards in Table 7.5.7.1 based on the number of **parking spaces** served.

~~f-g.~~ The minimum and maximum widths shall be measured at the **road boundary** and apply within the **site** until the first **vehicle control point**.

~~g-h.~~ For the purposes of access for firefighting, where a **building** is either:

- i. located in an area where no fully reticulated water supply system is available; or
- ii. located further than 75 metres from the nearest **road** that has a fully reticulated water supply system including hydrants (as required by [NZS 4509:2008](#)), **75 metres is measured from the**

road boundary via an existing or proposed property access, to the main entry from the road (Figure 7A); or:

iii. is a residential unit on rear site, **vehicle access width must be a minimum width of 7.5 metres, with ~~shall have~~** a minimum formed width of 3.5 metres **for its entire length** and a height clearance of 4 metres. Such **vehicle access** shall be designed **and maintained** to be free of obstacles that could hinder access for emergency service vehicles.

Figure 7A - Fire Access Requirements Diagram

~~h-i.~~ In car **parking buildings** there shall be a vertical clearance of not less than 2.5m above car park spaces for people whose mobility is restricted, and along the full length of any **accessible** route providing vehicular **access** to those car **parking spaces**.

~~i-j.~~ Where a mix of activities is proposed, the largest relevant dimension is applicable.

~~j-k.~~ **Emergency service facilities** do not need to comply with the maximum **formed** width, unless located on a **key pedestrian frontage**.

~~k-l.~~ In **Central City**, height refers to the minimum clear height from the surface of the formed **access**.

~~l-m.~~ Any **access** located on a Central City 'Active Frontage and Verandas' as shown on the planning maps shall have a maximum formed width of 7 metres.

~~m-n.~~ The maximum gradient at any point on a **vehicle access** shall be in accordance with Table 7.5.7.2, except a maximum gradient of 1 in 5 (minimum 4.0 metres long transition ramps for a change of

grade 1 in 8 or greater) shall apply for **accesses** that are identified in (g). For curved accesses, the maximum gradient shall be measured on the inside of a curved **vehicle access**.

n-o. The maximum change in gradient without a transition shall be no greater than 1 in 8 (12.5%). Changes of grade of more than 1 in 8 (12.5%) shall be separated by a minimum transition length of 2 metres (see Figure 9 for an example).

o-p. Where the gradient exceeds 1 in 10 (10%) the **vehicle access** is to be sealed with a surface that enables safe access in wet or icy conditions.

p-q. Where a **vehicle access** serves more than six car **parking spaces** (or more than six **residential units**) and a footpath is provided on the **frontage road**, the gradient of the first 4.5 metres measured from the **road boundary** into the **site** shall be no greater than 1 in 10 (10%) (see Figure 10 for an example).

Advice note:

1. See [Rule 7.4.3.4](#) for when onsite manoeuvring is required.
2. The difference between minimum **formed** width and minimum legal width may be utilised for planting.
3. For accesses of less than 6m the **vehicle control point** is at the property boundary.
4. Design guidance for ramp design may be obtained from the [Australian/New Zealand Standard for Offstreet Parking, Part 1: Car Parking Facilities](#), and any subsequent amendments. Compliance with the Australian/New Zealand Standard is recommended, but is not a requirement to achieve permitted activity status.

complies with the provisions of [Table 7.5.11.45](#) (outside the Central City) and [Table 7.5.11.56](#) (within the Central City).

Appendix 7.5.12 – Road classification system

- a. The purpose of [Appendix 7.5.12](#) is to outline the Road Classification System, which is used to distinguish **roads** into categories, as some of the rules in the [District Plan](#) only apply to some of the **roads** in a particular category.

1. Description of the Road Classification System

a. Functional hierarchy (Movement and Place Functions):

- i. The Road Classification System (based on the Road Classification System adopted in the [Christchurch Transport Strategic Plan](#)) presents a dual role for **roads** by applying a 'place' (land use) function for **roads**, alongside a 'movement' (or link) function.
- ii. The Road Classification System in the [Christchurch Transport Strategic Plan](#) has been simplified for use in the [District Plan](#). The traditional four 'movement' function categories remain (**Major arterial road**, **Minor arterial road**, **Collector road** and **Local road**) to show the role that the **road** plays in moving people and goods around the transport network. Some **roads** have changed their classification from the previous District Plans as changes to the network have occurred over the last few years. Within the **Central City** the collector category is referred to and further distinguished as Main Distributors and Local Distributors to be consistent with the Christchurch Central Recovery Plan.
- iii. In addition to the four 'movement categories', four 'place categories' now sit within the system to reflect the different 'place' requirements: Rural, Industrial, Residential, and Centres. These additions to the categories take into account the surrounding land use, and show the role the **road** plays in contributing to the **amenity values**, identity and public space of the **adjoining** area. All of the **Central City** is classified as within the centres category. However it is referred to and further distinguished as Outer Zone, Inner Zone and Core to be consistent with the Christchurch Central Recovery Plan.
- iv. When the four place types are combined with the four levels of movement function, a two-dimensional array, or 'matrix', with 16 potential cells is created. This gives **roads** a

dual classification, of one 'place' function and one 'movement' function. This ensures, for example, that **arterial roads** in residential areas are managed differently to reflect their context in a different manner than **arterial roads** in industrial areas or **local roads** in residential areas.

b. Use hierarchy (modal networks):

- i. In addition to the functional hierarchy, a **road** use hierarchy has also been defined within the **Christchurch Transport Strategic Plan**. These networks highlight that different modes of transport have different priorities within the network. There are five modal networks defined in the Christchurch Transport Strategic Plan:
 - A. the cycle network of major, local and recreational **cycle routes** (including on- and off-road **cycle ways**, and **cycle ways** within rail corridors);
 - B. the **core public transport route** network;
 - C. the walking network;
 - D. the freight network (including the rail network); and
 - E. the **strategic road network**.
- ii. These networks are not specifically shown in the **District Plan** as they will be subject to change over time. However, they are an important part of Christchurch's transport network and will be considered as part of the Integrated Transport Assessment process.
- iii. In addition to the classification system the **Christchurch Transport Strategic Plan** highlights the need to manage the **road** network more efficiently. The Christchurch Network Management Plan is being developed to guide how the network will be managed based on user priority and the time of day, to reflect the different demands that occur on the networks and the importance of prioritising users during different times of the day.

Advice note:

1. that **Appendix 8.10.3 of Chapter 8** contains the standards for new **roads**.

2. Summary of the Road Classification categories

- a. Each **road** will have a dual classification both a 'movement' and 'place' classification (see Figures 20 (a-f) for maps of the **road** classification). The 'movement' and 'place' function categories are described in Table 7.5.12.1.

Table 7.5.12.1 Explanation of movement and place categories

	Movement function category	Explanation
a.	Major arterial roads	State Highways and key roads in Christchurch District that cater especially for longer trips. Major arterial roads are the dominant elements of the roading network which connect the major localities of

	Movement function category	Explanation
		the region, both within and beyond the main urban area, and link to the most important external localities. Some major arterials, particularly some state highways, serve an important bypass function within Christchurch District , directing traffic through it to areas beyond. They are managed to minimise adverse effects from access on network efficiency. All motorways within Christchurch District are classified as major arterial roads .
b.	Minor arterial roads	Roads that provide connections between major arterial roads and the major rural, suburban and industrial areas and commercial centres . Generally, these roads cater for trips of intermediate length. They will generally connect to other minor arterial roads and major arterial roads and to collector roads . Arterial roads provide the most important movement function and as such require the highest degree of movement function protection. They may also define the boundaries of neighbourhood areas.
c.	Collector roads	Roads that distribute and collect local traffic between neighbourhood areas and the arterial road network. These are of little or no regional significance, except for the loads they place on the arterial road network. They link to the arterial road network and act as local spine roads , and often as bus routes within neighbourhoods, but generally do not contain traffic signals. Their traffic movement function must be balanced against the significant property access function which they provide. Collector roads within the Central City are known as distributor roads . These roads have a similar 'movement' function to the distributor streets in the Central City , which are shown in the Christchurch Central Recovery Plan.
d.	Main Distributor Streets (within Central City only)	A specific type of collector road which form key movement corridors into the Central City from the surrounding areas. Main Distributor Streets are the second highest order link types within the Central City and form key movement corridors within the Central City from surrounding areas.
e.	Local Distributor Streets (within Central City only)	A specific type of collector road which are important for distribution of traffic to parking precincts or provide for public transport movements. Local Distributor Streets are the third highest order link types and are important for the distribution of traffic to parking precincts, or to provide for public transport movement.
f.	Local roads	All other roads in Christchurch District . These roads function almost entirely for access purposes and are not intended to act as through routes for motor vehicles.
	Place function category (outside the Central City)	
g.	Urban (Centres)	Any road that is adjacent to a Commercial Zone. These are the areas which are shown as the Urban (Centres) Place Type on the Road Classification Maps (Figures 20(a - f)).

	Movement function category	Explanation
h.	Urban (Industrial)	Any road that is adjacent to an Industrial Zone. These are the areas which are shown as the Urban (Industrial) Place Type on the Road Classification Maps (Figures 20(a - f)) ¹ .
i.	Urban (Residential)	All other roads within the existing urban area as defined by Map A of Chapter 6 of the Canterbury Regional Policy Statement, as well as roads that are adjacent to any other Residential Zone in Christchurch District . These are the areas which are shown as the Urban (Residential) Place Type on the Road Classification Maps (Figures 20(a - f)).
j.	Rural	All roads outside the existing urban area as defined by Map A of Chapter 6 of the Canterbury Regional Policy Statement, except for roads adjoining to any Residential, Industrial, and/or Commercial Zone in Christchurch District . Rural roads are generally the roads classified as rural or semirural in the road classification system in the Christchurch Transport Strategic Plan.
Place Function Category (within the Central City)		
k.	Core	Any road within the core as shown on Figure 19
l.	Inner zone	Any road that is within an area bordered by Kilmore, Madras, St Asaph Streets and the eastern edge of Hagley Park, and also all of Victoria Street, and Colombo Street between St Asaph St and Moorhouse Ave. This area is shown on the Road Classification Map - Figure 19.
m.	Outer zone	Any other road within the Central City .

¹ If a **road** is adjacent to a Commercial Zone on one side of the **road** and adjacent to an Industrial Zone on the other side of the **road**, then the place function is Urban (centres).

¹ Marshs Road (Shands Road to Main South Road) is a Minor Arterial. However, a new road between Main South Road and Shands Road (north of Marshs Road) is proposed to link with the Pound Road/Barters Road realignment (see the Road Classification maps). It is intended that in future this new road will be a Minor Arterial instead of Marshs Road between Main South Road and Shands Road.

Appendix 7.5.13 – Building setbacks to level crossings

a. Sight triangles for road/rail level crossings

Figure 21 - Approach sight triangles for public road/rail level crossings

Advice note:

1. The 30 metre distance is measured from the closest outside rail.
2. Where there is more than one set of railway tracks, then 25 metres is added to the 320 metre distance along the railway track for each additional set of tracks.

Figure 22 - Restart sight triangles for public road/rail level crossings

Advice note:

1. The 5 metre distance is measured from the closest outside rail.

b. Sight triangles for rail siding level crossings

Figure 23 - Approach sight triangles for public [road/rail siding level crossings](#).

Appendix 7.5.14 – Vehicle access to sites fronting more than one road – In Central City

- a. If a **site** fronts more than one **road** then **vehicle access** shall only be gained from the most preferred **road** that the **site** has **frontage** to, as shown in Table 7.5.14.1, except that, where the higher preference **road** is a one-way **road** or is divided by a raised median, a second **vehicle access** point may be gained from the next most preferred **road**. The **vehicle access** standard in [Appendix 7.5.14](#) does not apply to the fire station **site** (Lot 1 DP53863).
